

The 12-Automation Checklist

Reclaim ~6 hours a week. Twelve automations a solo founder can wire up in an afternoon — every one runs on a free tier or self-hosted stack. Built from the workflows that run cloudless.gr in production.

1. Social analytics digest

Pull every platform's numbers once a day, have AI write the summary, deliver to Slack or email.

Stack: n8n cron + your analytics source + any LLM · Saves: ~45 min/week

2. Cross-platform publishing

Write one post, publish to LinkedIn, Threads, Instagram, TikTok and Facebook automatically.

Stack: SocialAuto or a scheduled n8n workflow · Saves: ~60 min/week

3. Content repurposing

Turn each long post into platform-adapted variants (tone, length, format) without rewriting.

Stack: LLM prompt chain + brand voice system prompt · Saves: ~40 min/post

4. DM keyword replies

Comment 'AUTO' -> auto-DM the link. Highest-converting social funnel there is.

Stack: Manual replies at small scale; ManyChat free tier later · Saves: scales with volume

5. Lead capture to inbox

Every download/lead lands in a spreadsheet or CRM with zero manual entry.

Stack: Webhook -> Google Sheets / Airtable free tier · Saves: ~30 min/week

6. Invoice & payment tracking

Auto-flag overdue invoices and send a polite nudge before you notice.

Stack: Stripe/Paddle webhook + scheduled check · Saves: ~20 min/week

7. Meeting notes to tasks

Transcribe calls, extract action items, push them to your task board.

Stack: Whisper (self-hosted) + task webhook · Saves: ~25 min/meeting

8. SEO rank & content watch

Weekly check: which pages gained/lost positions, drafted straight into a report.

Stack: Google Search Console API + LLM summary · Saves: ~35 min/week

9. Uptime & deploy alerts

Get pinged the moment prod breaks or a deploy rolls back — before users complain.

Stack: Healthchecks.io free tier / Uptime Kuma · Saves: sleep at night

10. Email triage labels

Classify inbound mail (lead / support / spam) and draft first replies automatically.

Stack: IMAP poll + LLM classifier · Saves: ~30 min/day

11. Competitor changelog watch

Get a weekly diff of competitor pricing/feature pages you actually care about.

Stack: URL watch + diff + LLM summary · Saves: ~20 min/week

12. Weekly brief generation

One scheduled job that assembles your metrics, wins, and next-week plan into a brief.

Stack: n8n cron + your data sources + LLM · Saves: ~50 min/week

The tools we actually run

- **n8n** — Self-hosted workflow engine — the backbone of half this list.
- **beehiiv** — Newsletter platform with a genuinely useful free tier.
- **Make** — No-code automation, generous free plan for light flows.
- **Uptime Kuma** — Free self-hosted monitoring with alerting.
- **Semrush** — SEO/competitor data when you're ready to go deeper.
