

The 12-Automation Checklist

Reclaim ~6 hours a week. Twelve automations any startup can wire up in an afternoon — every one runs on a free tier or self-hosted stack. Built from the workflows that run cloudless.gr in production. Updated October 2026.

1. Cross-platform publishing

Write one post, publish to LinkedIn, Threads, Instagram, TikTok, Facebook, and X automatically. One dashboard, six platforms, zero copy-pasting.

Stack: Celery + Redis + free-tier platform APIs · **Saves:** ~60 min/week

2. AI content generation

Generate platform-adapted post copy from a single brief. SEO scoring, NLP plain-English check, and brand-voice compliance built in.

Stack: Workers AI / local LLM + brand voice system prompt · **Saves:** ~40 min/post

3. Social analytics digest

Pull every platform's engagement, reach, and follower data daily. AI writes the summary and delivers it to Slack before your coffee.

Stack: n8n cron + analytics APIs + LLM summary · **Saves:** ~45 min/week

4. Lead capture to CRM

Every form submission, download, or booking lands in your CRM with zero manual entry. Automatic lead scoring and Slack notification.

Stack: Webhook + EspoCRM / Airtable free tier · **Saves:** ~30 min/week

5. SEO rank and content watch

Weekly report: which pages gained or lost positions, new keyword opportunities, and a drafted action plan.

Stack: Google Search Console API + Ahrefs + LLM summary · **Saves:** ~35 min/week

6. Uptime and deploy alerts

Get pinged the moment production breaks or a deploy rolls back. Self-hosted monitoring with zero monthly cost.

Stack: Uptime Kuma + Healthchecks.io free tier · **Saves:** sleep at night

7. Serverless deploy pipeline

Push to main, auto-deploy to Cloudflare Workers. Zero-downtime with automatic rollback if health checks fail.

Stack: GitHub Actions + Wrangler + Workers · **Saves:** ~20 min/deploy

8. Automated backup and restore

Daily backups to R2 with one-click restore. Database, files, and config. Tested monthly so it works when you need it.

Stack: Cron + R2 + pg_dump / restic · **Saves:** disaster-proof

9. Email triage and auto-reply

Classify inbound mail (lead / support / spam) and draft first replies automatically. Route to the right person.

Stack: IMAP poll + LLM classifier + self-hosted Postfix · Saves: ~30 min/day

10. Custom analytics dashboards

Real-time dashboards that pull from your actual data sources. No more spreadsheets, no more guessing.

Stack: Metabase / Grafana + DuckDB / Postgres · Saves: ~50 min/week

11. Competitor pricing watch

Weekly diff of competitor pricing and feature pages. AI summary of what changed and what it means for you.

Stack: URL watch + diff + LLM summary · Saves: ~20 min/week

12. Weekly strategy brief

One scheduled job assembles your metrics, wins, content performance, and next-week plan into a brief. Delivered to Slack every Monday.

Stack: n8n cron + Windsor.ai + LLM · Saves: ~50 min/week

The tools we actually run

- **n8n** — Self-hosted workflow engine — the backbone of half this list.
- **Cloudflare Workers** — Serverless compute with zero cold start. Free tier covers most SMB workloads.
- **Uptime Kuma** — Free self-hosted monitoring with alerting — runs on a Raspberry Pi.
- **Metabase** — Open-source business intelligence. Connect to any database, get dashboards in minutes.
- **Workers AI** — Run inference on Cloudflare's edge. Free tier includes 10K requests/day.
